Octane fitness q37 service manual book free printable 2017

If you are looking to purchase from somewhere else, please note there are different compatibility requirements for Octane Fitness ellipticals. The “glide factor” is incorporated into the calculation as well. Moisten the back of the strap with water for better contact. If either of the above are working, a magnet or internal brake cable may be stuck or broken. Q35, Q37, Q45, Q47: Near the front beneath the chrome rails xR6: Near the front (look for the ‘power input’ sticker) xR3, xR4: At the back below the Octane Fitness logo If you have a Q37xi or Q47xi with SmartLink app, you can view the owner’s manual from the “Octane Extras” tab in the app. If you have an older model Octane Fitness elliptical the elliptical does not power completely off. Space-Efficient Design Significantly shorter than other premium elliptical machines or treadmills, the Q37 fits virtually anywhere at home. Try the following and see if heart rate reading returns to normal/expected rates: Replace the battery in the chest strap (if it is the style of strap where you can do this; some batteries are ‘built-in’). The distance is calculated by using a formula that incorporates RPM (speed) and stride length. A point of reference for Octane machines is that averaging between 50-60 RPMs will equate to roughly an 8-minute mile. Must use Polar non-coded chest strap with Octane Fitness ellipticals. If so, replace it with a new brake cable. Your HIP number is the distance from your hip socket joint through your knee to your heel. xR4ci, xR6e, xR6ce, Q37ci and Q47ci models: Only non-coded Polar brand chest straps and heart rate monitors can be synced. Unfortunately the new console types are not compatible. With its low step-up height and rear access, it’s simple for everyone to get on and off safely. Do the shoes move freely? It is likely that the levelers on the machine are not properly set for your floor. Try adjusting the position of the machine on your floor. Yes, this is normal. On xR6 seated ellipticals: The base serial number is located on the right side in the seat track (visible with the seat in its lowest position). Also, some individuals have a body chemistry that is not fully compatible with heart rate telemetry. Adjust the following one at a time, testing the machine after each one to see if the squeaking goes away. The Beginner program is a great routine for beginners or people just getting back into their workouts. The Q37 features close pedal spacing (only 1.8"), so your body is properly aligned from head to toe, thereby minimizing pressure on the lower back. Refer to your assembly instructions to remove the console and check the connections from the console to the upright tube and the connection below the mast boot. A verification email will automatically be sent or resent when you create or edit your profile. And Converging Path handlebars follow the natural path of the arms when walking or running. If used, it can cause an increase in squeaking. Consoles and PVS: To clean consoles and PVS displays, use a clean, dry microfiber cloth to remove excess sweat, moisture and debris. When “HILLS” is displayed, press Enter. This is likely caused by a build-up of foreign material on the chrome rails and/or wheels. SmartLight signals how hard you’re exercising, if you’re in your target heart rate zone and when to prepare for the next interval in a Workout Booster or CROSS CiRCUIT. With MultiGrip handlebars, you can target different arm, chest and back muscles simply by changing your grip. Chest adjusts from 25 to 54 inches Note: Wireless heart rate monitoring is only available on xi, ci, ce, and e model consumer consoles, ZR8 and ZR7 Zero Runners, Airdyne Pro, and all commercial grade products. If the error code is the same as it was before you swapped the cables, the issue is in the lower control board. Once the top cover is off, try the following to fix a loose drive belt: Tighten down the belt tensioner bolt on the left hand side of the brake mount. Check the following items to resolve the issue: Is the brake cable seated properly in the slot on the brake? The Q37xi console accommodates your iPad with three placement options – Watch, Read and Surf. Do NOT use WD-40® or any type of silicone spray on the racks or rollers. Try the chest strap on another person to see if they are able to get a reading. It is natural for the heel to rise faster than the toe when going forward. Thoroughly dry machine with a clean, dry cloth or paper towels. SmartLink cannot sync to the console or access any information from the console in offline mode. This is a brake error, indicating that the servomotor may not be working properly. To do so, wipe down the chrome rails and each wheel with a dry cloth. The follow device requirements are required to run the Octane Fitness app: iOS Devices – Bluetooth 4.0; 4th generation iPad or later, iPad Mini 2 or later, iPhone 5 or later, iPod Touch 6th generation or later; running iOS 10.0 or later. When D3 (Keypad test) is displayed, press Enter to start the test. Follow these steps to identify the problem: Run the keypad diagnostics by holding down Time +/- and Level +/- at the same time. Q37xi and Q47xi models: Any Polar 5KHz, Bluetooth 4.0 or Ant+ (Garmin) chest straps and heart rate monitors can be synced. Plug the unit back in and check the error code again. To “wake” your elliptical, simply press any button or begin pedaling. Offline mode allows you to browse through the SmartLink application to become familiar with the app navigation. Turn off the Bluetooth from your iPad device. Each day’s workout includes a preset value for time, resistance level, and a recommended speed (RPM). If your product is a Q45 or Q47, check to see if the power supply LED is blinking, indicating a power supply issue. Octane Fitness has designed a creative new workout on its elliptical machines that mimics real-life MMA bouts and gives exercisers an effective training routine like a fighter in the ring. No, older model Q37 and Q47 ellipticals cannot be updated with x or xi consoles. If you can’t connect to your console or are not seeing the console in the list you can try the following troubleshooting options: Force quit the iPad app. If you want to save these new settings, just press and hold My QuickStart again for three seconds or until you hear the beep. Ceiling height clearance is only 8” higher than the tallest user, so it can easily be placed in areas with low ceilings. Android Devices – Bluetooth 4.0; Android Tablets running Android OS 5.0 or later, 1 GB of RAM (not compatible with Android phones) Note that internet connectivity is required for certain videos either through WiFi or mobile networks (GSM/3G/4G/LTE). With body position the more you lean forward the more your foot comes off the pedal. Product usage, operation, user health, contact, company, etc. Check the moving handlebar covers to make sure the plastic is not rubbing with the main shroud. Contact heart rate readings will override your chest strap reading. The Octane Fitness app will connect to your xi console via Bluetooth and the app itself will function without an internet connection. Press and hold My QuickStart 1 (or My QuickStart 2) button until you hear the console beep, indicating that the profile has been saved. This resets your saved profile using the new attributes. This is related to your foot position and may be elevated by making minor adjustments to your body positioning on the elliptical. The large display screen simultaneously displays all your workout data, and only Octane offers SmartLight technology. Octane Fitness ellipticals can be registered online by clicking here. If it still feels loose continue making these adjustments until the machine slipping disappears. Press any +/- key until “MOM” displays in the matrix window. Remove the pedals on a standing elliptical to reduce the length. Important: Never spray cleaning solutions directly on the machine, and never use cleaning solution on the consoles or PVS. Real Running Motion Designed based on precise human biomechanics, Octane elliptical machines deliver supremely comfortable natural movement and flow, both forward and backward, without stress on the joints, which is ideal for all levels of exercisers. 30:30 Interval Program* The 30:30 program is an innovative new workout available exclusively on Octane Fitness elliptical machines. The keypad may be faulty or a button may be stuck. Pedal articulation, or how much the pedal pivots, will be impacted as the pedal follows your foot’s movement. On all products, the power input is on the right side of the unit as you face forward (toward the console). Is the brake cable cracked or broken? You can use My QuickStart 1 and My QuickStart 2 to save two different workouts. The 30:30 interval program was designed by Paul Robbins of Athletes' Performance to increase cardiovascular performance for elite athletes, but works equally well for all exercisers.Only available on xi console MMAMixed Martial arts, or MMA, is an all new type of sport that has become a favorite worldwide. The connection button will display “connected” status with a blue Bluetooth logo next to it. Use of such products will invalidate your product warranty. If you elliptical will not power on, check the following: Is the unit plugged in? A new or replacement chest strap can be purchased from the Octane Fitness website under the Accessories section of the Support page. If you let go, you will lose your heart rate reading. Power off the console by using the power button or unplugging the unit. The heart rate receiver is located behind the plastic cover on the back of the seat. SmartLight also provides feedback during heart rate controlled programs and provides visual prompts when Workout Boosters are activated. Make the parts snug, but be careful not to over tighten the plastic components. And greater intensity leads to better results and efficient, effective workouts that keep users coming back again and again. The console serial number is located on the lower edge of the console (visible with the plastic console cover removed). Also, check the heart rate cable connection(s) on the console back (and at the bottom of the seat back on the xR6) to make sure the connectors are properly seated. Research conducted on behalf of Octane Fitness has found that the distance from your hip socket joint through your knee to your heel is the most precise measurement to determine an appropriate stride length. We call this measurement your Hip Indexing Pivot (HIP) number. Visit Apple support for assistance. Learn more about SmartLink by clicking here. These add variety, motivation and productive intervals. Touch the connected dialog to open the connection window and swipe left on the console with the Bluetooth logo, then choose the red disconnect button. The screws under the handlebar cap may be loose. Email addresses are only used to create and confirm your account user ID; Octane Fitness will not user this email address for any other purpose nor will it be sold to any other party. First, check to see that MOM mode is enabled by following these steps: Enter User Set-up by pressing and holding the Level +/- keys for three seconds. However, internet connectivity through Wi-Fi or a mobile network (GSM/3G/4G/LTE) is required to play certain non-workout related videos. Press any +/- key until “EXIT” displays in the matrix window, then press Enter. These error codes indicate a communication error between one of the stride motors and the lower control board. Are you able to manually move the brake? When you adjust the levels can you hear the brake motor moving? The console serial number on black Q35 or Q45 is located on the underside of the console. This may result from the speed sensor being misaligned. Follow the instructions in your assembly instructions to remove the top cover, then test and align the speed sensor. Follow these steps to put elliptical in sleep mode: Press and hold the Pause/Clear button until you hear a beep. Follow the instructions in your assembly instructions to remove the top cover. The Octane Fitness formula also accounts for a “glide factor.” During jogging or running, there is a moment when both feet are in the air and the person is traveling distance. Click here to go there now. Do NOT use aerosol sprays, solvents, abrasives or gym wipes on the console. On standing ellipticals (Q35/Q37/Q4/Q47): The base serial number is located below the right chrome rail next to where the power supply plugs in to the machine. Does a light switch control the outlet? To exit the Keypad test, press Pause Clear two times. Is there power from the wall? If you are wearing a chest strap: Make sure it is snug against your bare skin at the bottom of your pectoral muscles with the Octane Fitness/Polar logo facing away from your body and right side up. Contact Octane Fitness or your local dealer to replace the faulty part. If you decide during your workout to change what you have saved, enter the changes on the console. Octane Fitness’ flywheels are sized to minimize startup resistance and maintain smooth movement throughout the elliptical motion. It is not relevant to compare flywheels between manufacturers as the linkage drive systems are totally different. Place the cover back on top of the machine and try the machine. Apply cleaning solution directly on the cloth before wiping down the machine. Minimize leaning forward too much. The problem may be fixed by cleaning the chrome rails and wheels. If you are having trouble syncing with the cloud try the following: Verify the device has a connection to the internet – WiFi or a mobile network (GSM/3G/4G/LTE). This email address becomes your user ID which will enable features like syncing workout history, preferences, profile picture, etc., to the Apple cloud so you can access your data on all your mobile devices. Make any necessary adjustments. On xR3/xR4 seated ellipticals: The base serial number is located on the right side on the metal frame just in front of the flywheel. This may be a result of the drive belt tension in your unit being too loose. Tighten the screws under both pedals. SmartLink connects to the console via Bluetooth 4.0. Before trying to connect, make sure Bluetooth 4.0 is turned on in your iPad settings. Check at the wall, at the power input of the machine, and at the power supply. Durability Octane Fitness delivers premium, ultra-durable ellipticals that are built to deliver long-lasting, superior performance. Try the following to prevent feet/toes from numbing: Position your feet on different areas on the foot pedal. Power supplies, consoles, keypads, programs, modes, errors, settings, etc. DO NOT use WD-40 or silicone spray. Advanced Console Technology The console is simple to navigate, whether you’re choosing Quick Start or an advanced workout. Save the first one according to the directions above, then press Pause/Clear and follow the steps again to save the second workout using the other My QuickStart button. Like walking, lifting your heels off the pedals is a natural motion. The matrix display reads “UNFUELING”, and just one LED in the X-mode window remains lit. Tighten the front and back of the rails. If you have a new (2014) Q35, Q37 or Q47 you may power off your elliptical using the power button on the console. You may be getting interference with another device in the environment, or you may have a faulty or discharged battery in chest strap. With built-in flexibility to meet each fighter's unique needs, the Octane MMA program challenges and motivates as the machine "fights back".Only available on xi console Get more out of your workout when you use a Polar non-coded chest strap for wireless heart rate monitoring. If that does not help, refer to your assembly instructions for adjusting the levelers of your machine. You choose the level of technology you want to fuel your workout. Contact Octane Fitness or your local dealer for assistance. If the error code switched from an error 3, 31, 32 or 33, to an Error 2, 20, 21 or 22 the issue is in the right stride motor. Plus, we stand behind our products with a five-year warranty on parts and one-year warranty on labor. Something may be loose on your machine. If you are using the digital contact grips, make sure you are grasping the grips firmly and keeping your hands steady and in place. The console serial number on gray Q35, Q37 or Q47 is located on the bottom edge of the upper console (just above the keypad). If you have questions, we have answers. Choose a category below. The MultiGrip handlebars also feature contact heart rate sensors and fingertip controls to easily adjust the speed and resistance. If you are using the digital contact grips: Make sure that your hands are firmly grasping the grips and that you maintain a constant grip. If the error is not cleared, contact Octane Fitness for additional instructions. Replacement power supplies can be purchased on the Octane Fitness website under the Parts section of the Support page. Confirm the link was activated with a verification email. If multiple consoles are present, a list of available consoles will appear in the connected window. (On older black models the test begins automatically.) Press each button on the keypad and you should hear a beep. To activate Mom Mode, press and hold the Program +/- keys for three seconds to activate MOM mode. Polar chest strap gives real-time readout of heart rate and allows for more accurate calorie burn tracking. Now that’s smarter training. Manuals can also be downloaded from the Manuals and Warranties section of the Support page. Try unplugging and re-plugging in the connections on the back of the console and on the lower control board (located under the top main cover) to clear the error. Plug a lamp or radio into the outlet. If none of these adjustments resolved the brake error, contact Octane Fitness or your local dealer for assistance. The preset values are: Program Day (Level) 1 2 3 4 5 6 7 8 9 10 11 12 13 14 Resistance Level 1 1 1 2 2 2 3 3 3 4 4 4 4 5 Time 10 10 11 11 12 13 14 15 16 17 18 19 19 20 RPMs 30 35 35 35 35 35 35 40 40 40 40 40 45 45 SmartLink is the app that connects your mobile device to an Octane Fitness xi console. Located at the top of the x and xi consoles, it communicates important information for your workout. The primary function of the SmartLight is to act as an intensity meter, giving you visual affirmation as your resistance level or speed increases or decreases. Both the 10K and 1/2 Marathon distance goal programs include the “Hills” profile option. Alternately, you may press the power button on the console or force quit the app. Because the body feels so good during workouts, you are more likely to stay on longer and keep coming back. Remove the top cover and then remove the console mast on a standing elliptical to reduce height. Home elliptical machines are subject to the same rigorous testing and uncompromising standards that Octane is known for in order to produce high-quality equipment that offers reliable operation and ease of ownership. The console serial number is located on the back side of the console (visible with the plastic console cover removed). The SmartLink app is compatible with Android tablets running OS 4.3 and higher that have Bluetooth 4.0. If you search the Goolge Play store (search “Octane Smartlink”) from your Android tablet and SmartLink does not appear, then the device does not meet app requirements. This “glide factor” translates into further distance than what your leg’s stride would be. Two things determine how much your foot comes off the pedal; body position and pedal articulation. This is an industry standard with elliptical cross trainers; however, each manufacturer may incorporate the “glide factor” differently. However, you can put your elliptical into a sleep mode, which is a virtual “off” that requires very little power. Physical parts, movement, noises, receivers, wheels, handlebars, etc. Check the area and remove any devices that might be interfering, such as wireless phones, remote controls, or other exercise equipment with wireless heart rate capability. To select “Hills”, follow these steps when programming your workout: When prompted “FLAT OR HILLS”, press the up or down arrow key twice. If the error code switched from an error 2, 21, 22 or 23 to an Error 3, 30, 31 or 32, the issue is in the left stride motor. Press Enter until “On” is displayed. Console may also blink on and off due to a bad connection between the console and base, check the connection to the console and the connection at the bottom of the console upright tube. Adjust as necessary. Does it go on? Check the following: Do the level numbers change on the console when you press the level button? Click here to be directed there now. If a button does not beep, the key may be stuck or the membrane could have been damaged and will need to be replaced. Try maintaining an upright posture so blood is able to flow down to your feet. This code indicates a communication error between the console and lower control board. Remove moving handlebars to reduce the width of both seated and standing ellipticals. Please call us at 800-726-9662. Each Octane Fitness elliptical has two serial numbers; one on the base and one on the console. If needed, use a mild soapy solution to remove excessive build up, then wipe with a dry cloth. Important: Keep liquids away from console, and do NOT spray cleaners directly onto console or get moisture into any openings. This program is designed to carry you through 14 workouts, one per day, gradually increasing intensity each day. Confirm you are logged in to your account by selecting yourself as the user, then select “Edit My Profile” and confirm that the status on the button bar displays “Logged In“. Local data on the mobile device will automatically sync with the cloud once your account is activated. Turn the belt one full rotation. Once Bluetooth 4.0 is activated, your device will automatically connect to the console if a single console is present. It motivates and challenges exercisers of all abilities. Is the console properly connected to the base unit? If you are unsure which model of iPad you own, iPad model numbers can be found on the Apple Support website. Follow these steps to identify the issue: Unplug the unit and swap the two stride motor plug cables located on the lower control board inside the machine. Remove the handlebar covers and tighten the hex head screws on handlebars. Select the desired console from the list and connect to the console with the appropriate model. Workout Boosters Octane’s trademark Workout Boosters, including X-Mode, GluteKicker and ArmBlaster, add cross training with various commands every few minutes to keep the heart pumping and muscles pushing. SmartLight is a feature found on new (2014) Q37 and Q47 ellipticals. Can’t find what you need or need additional assistance? Tighten the shrouds. Upper-Body Ergonomics The patented, one-of-the-kind Converging Path and MultiGrip handlebars better engage the upper body and fit every exerciser comfortably. To program your favorite settings for the My QuickStart button follow these steps: Enter all of your information as usual – program, time, level, age and weight.
